The document contains engineering plans and specifications for a street light installation. It includes details such as the type of arm, foundation details, and specifications for the concrete cover and bolt circle. The plans are designed to ensure that the installation blends symmetrically with the surface of the shaft. The plans also include instructions for the installation of pole-top brackets, anchors, and bolts, and specify the materials and coatings to be used. The document is a standard plan for street light installations, and it is intended for use in the City and County of San Francisco. The plans are intended to be used without consulting a registered professional engineer.
